

Zio Ciro ovens intended for the use in Mobile Catering or Trailers.

Due to many scenarios that can arise when using an oven for a mobile operation We offer a limited warranty on the structure of the oven when it is placed on/ in a vehicle.

The oven must be fitted by a professional van/ trailer conversion company and must be installed on antivibration mounts suitable for the ovens size and weight.

The ovens original 4 x feet, which are welded to the underside are only suitable for being used to locate into the 'optional floor stand' supplied by the manufacturer for static use, these 4 x feet must be replaced, or supported with additional steel box sections to provide additional support and dampened to deflect shock that may affect the ovens ceramic composition.

Due to lateral and horizontal forces when mounting a heavy load such as the Zio Ciro Pizza oven, it's very important to seek specialist advice to protect the oven from damages and shock which can occur when transporting your oven.

Within 12 months of purchase, we will supply the parts needed to replace a dome if it is damaged due to vibration to an extent that the oven becomes unfit for purpose, but no labour will be provided or included.

Zio Ciro do supply Anti Vibration feet, but these must be fitted and the existing legs to the oven must be replaced and welded with a suitable structure to ensure safe travel, the company takes no responsibility should you use the original feet designed for the floor stand.

We will also supply instruction on how to replace the dome however the customer will be responsible for replacing the dome.

The free replacement of parts is limited to once in the 12month warranty period, and subject to the manufacturer's discrepancy.

We can recommend a selection of specialist people to carry out these works.

Ceramic expands when hot, if you transport your oven when hot, adequate attention must be taken to drive with care during this period.
